Ensure your patients get the product you recommend. Prescribe the brand name of the catheter your patients deserve:

Luja™ SpeediCath® Self-Cath®

Intermittent catheter users who have insurance can typically pay the same price when buying any catheter within the same category: straight tip,¹ coude tip,² or catheter sets.³

DAW*

No
Substitution

* Dispense as written; exact language to specify brand dispensed varies by state. Contact your Coloplast Sales Rep or National Association of Boards of Pharmacy for more information.

Advise your patients to find a supplier who accepts assignment for the intermittent catheter. If your patients need assistance in finding a supplier, they may contact Coloplast Consumer Care at **1-866-226-6362**.

Steps to consider for patients to get the catheter they want:

1. Include the following information on each prescription:

Patient Name _____	
Address _____	
Type of catheter (straight, coude, kit / closed system)	
Rx: SpeediCath Compact Set 28422	
Dx: Urine retention	
5 catheters / day x 30 days / month = 150 catheters / month	
Brand of catheter	Frequency of catheterizations / day and total catheters needed / month
Do not refill _____	
Refill _____ Times	NPI Number _____
Date _____	Print Last Name _____

2. Enroll your patients in Coloplast Care

Call - contact Coloplast Care at 1-866-226-6362

Email - send request to care-us@coloplast.com⁴

Fax - send patient enrollment form to 1-855-676-2594

Website - www.coloplastcareconnect.us

Information from Coloplast Care is for educational purposes only. It is not intended to substitute for professional medical advice and should not be interpreted to contain treatment recommendations.

1. HCPCS A4351 (straight)**

2. HCPCS A4352 (coude)**

3. HCPCS A4353 (catheter set)**

4. We recommend encrypting emails and forms if sending over email.

Luja™ and all **SpeediCath®** catheters come with a unique hydrophilic coating, featuring our **Triple Action Coating Technology**. It consists of three strongly bonded elements, designed to protect the urethra in three ways:

Stays bonded

It stays bonded during insertion and withdrawal due to a proprietary base-coat that is covalently bonded to the catheter surface for an even coating without dry spots.

Stays smooth

It stays smooth because the polymer top-coat enables excellent water absorption for low friction, smooth insertion and reduced discomfort compared to uncoated catheters.

Stays hydrated

It stays hydrated with a special water-based solution that swells the coating and makes it instantly ready to use.

Prior to use, refer to product labeling for complete product instructions for use, contraindications, warnings and precautions.

Luja™ female with Micro-hole Zone Technology enables complete bladder emptying in one free flow¹

Luja™ female is the first female intermittent catheter with Micro-hole Zone Technology that minimizes residual urine¹ to reduce the risk of UTIs.² A study also showed that female users experience no discomfort during catheterization with Luja female.³

One free flow

The urine flow stops when the bladder is completely emptied¹

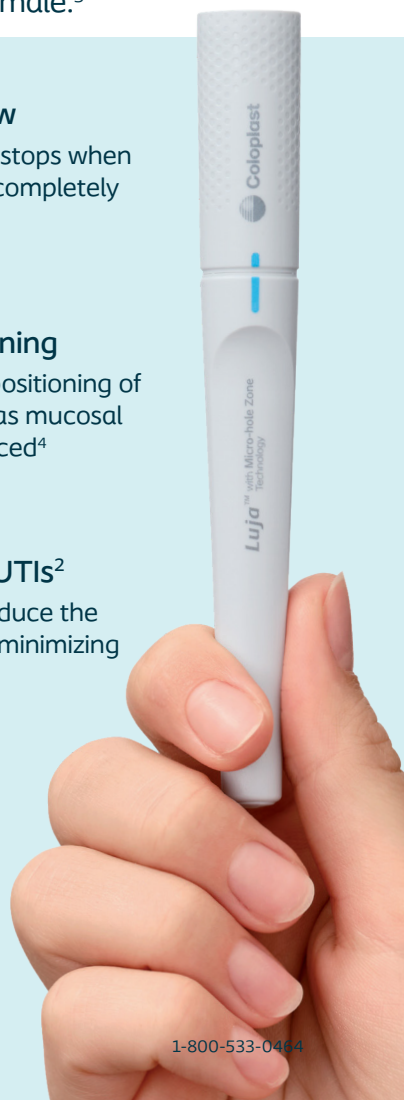

No repositioning

Enables no repositioning of the catheter¹, as mucosal suction is reduced⁴

Less risk of UTIs²

Designed to reduce the risk of UTIs by minimizing residual urine¹

Straight Tip Intermittent Catheters

Luja™ female

Luja™ female is the first and only female intermittent catheter with 50+ micro-holes⁵ enabling complete bladder emptying in one uninterrupted urine flow.¹ This catheter is not made with natural rubber latex, DEHP or other phthalates.

SpeediCath® Standard

The world's first ready-to-use hydrophilic-coated intermittent catheter

Easy to carry, store and use. The catheter is pre-hydrated and ready-to-use, eliminating wait time. The hydrophilic coating is smooth and uniform, designed to minimize urethral friction compared to uncoated catheters. The eyelets are polished for comfort. The uncoated Grip Zone™ area is created to offer control in handling. **This catheter is not made with natural rubber latex, DEHP or other phthalates.**

SpeediCath® Standard

SpeediCath catheter only. No insertion supplies.

Luja™ Coudé

with Micro-hole Zone Technology

Micro holes.

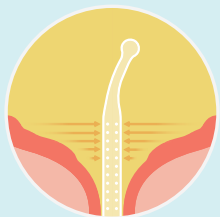

80+ micro holes.
Complete bladder emptying.¹

Macro difference.

Luja™ is 45% faster at emptying the bladder completely compared to conventional eyelet catheters.²

Residual urine in the bladder leaves intermittent catheter users at a greater risk of UTIs.³

Luja™ Coudé is the first intermittent catheter with Micro-hole Zone Technology to ensure⁴ complete bladder emptying in one free flow.³

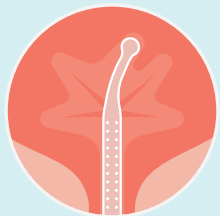

One free flow

The urine flow only stops when the bladder is completely emptied¹

No repositioning

There is no need to reposition the catheter, as mucosal suction is reduced⁵

Less risk of UTIs

Designed to reduce the risk of UTIs³ by minimizing residual urine and bladder microtrauma⁶

Coudé Tip Intermittent Catheters

SpeediCath® Flex Set with Accessories

The new SpeediCath Flex Set with Accessories is an integrated solution with catheter, urine bag and accessories, which contains everything that is needed for aseptic catheterization. The product has been designed for use in the clinical setting and developed to limit the risks of contaminating the sterile kit prior to use. **This catheter is not made with natural rubber latex, DEHP or other phthalates.**

The product comes with the following sterile content:

Closed system catheter:

- 1 SpeediCath Flex Set

Accessories:

- 1 pair of gloves
- 1 drape
- 3 aseptic swab sticks soaked in BZK

SpeediCath® Compact Male with SpeediBag®

The most compact catheter for men.

Hydrophilic-coated catheter that is pre-hydrated and ready-to use. This catheter is hygienic with a no-touch insertion. Its telescoping mechanism allows expansion from its small modest tube into a full length intermittent catheter for males. A 750 mL SpeediBag is included. **This catheter is not made with natural rubber latex, DEHP or other phthalates.**

SpeediCath® Compact Male with SpeediBag®

Code	Size	Units	Description	HCPCS*
28702	○ 12/18 FR	20	13.2" length includes funnel	A4353

SpeediCath® Standard with Insertion Supplies

The world's first ready-to-use hydrophilic-coated intermittent catheter.

Easy to carry, store and use. The catheter is pre-hydrated and ready-to-use, eliminating wait time. The hydrophilic coating is smooth and uniform, designed to minimize urethral friction. The eyelets are polished for comfort. The uncoated Grip Zone™ area is designed to offer control in handling. **This catheter is not made with natural rubber latex, DEHP or other phthalates.**

SpeediCath® Standard with Insertion Supplies

SpeediCath Standard intermittent catheter with one pair of non-latex exam gloves, one waterproof drape, two iodine prep pads and urine collection bag.

A better path to bowel control

Lori (mother)
and Julian,
Peristeen® Plus
user

Peristeen® Plus Transanal Irrigation System

Transanal irrigation with Peristeen® Plus is a well-documented bowel management technique that is effective at preventing fecal incontinence and chronic constipation up to two days for patients with neurogenic bowel dysfunction.^{1,2}

To learn more visit
www.coloplastcare.us/bowel.

Peristeen® Plus Transanal Irrigation

Code			HCPCS*
29152	Peristeen Plus system without catheters	1 control unit / 1 water bag (with lid) / 2 straps / 1 tube	A4459

*For important information regarding the use of HCPCS codes listed and code definitions see page 29

Transanal Irrigation

Indication: The Peristeen® (Plus) Transanal Irrigation System is intended to instill water into the colon through a rectal catheter, which incorporates an inflatable balloon, inserted into the rectum to promote evacuation of the contents of the lower colon. The Peristeen Transanal Irrigation System is indicated for use by children (2 years - <12 years old), adolescent (12 years - <18 years old), transitional adolescent (18 - <21 years old) and adult patients with neurogenic bowel dysfunction who suffer from fecal incontinence, chronic constipation, and/or time-consuming bowel management procedures.

Contraindications: Peristeen (Plus) Transanal Irrigation must not be used in the following situations: known anal or colorectal stenosis, colorectal cancer, radiotherapy to the pelvis, and recent abdomino-perineal surgery, active inflammatory bowel disease, acute diverticulitis, severe diverticulitis, previous diverticulitis and diverticular abscess, chronic symptomatic diverticular disease, within 3 months of abdominal, anal or colorectal surgery, within 4 weeks of endoscopic polypectomy, recent colonic biopsy, recent endoscopic mucosal resection (EMR) and recent endoscopic sub-mucosal dissection (ESD), severe autonomic dysreflexia, ischemic colitis, during spinal cord shock phase, complex diverticular disease, in patients who are pregnant and have not used the system before*. Since the list is not exhaustive, the healthcare professional should always consider individual patient factors as well. *If the patient is pregnant and has never used transanal irrigation before, they should not start the irrigation procedure during pregnancy.

Warning: Peristeen (Plus) Transanal Irrigation procedure should always be carried out with caution. Bowel perforation is an extremely rare, but serious and potentially lethal complication to transanal irrigation and will require immediate admission to a hospital, often requiring surgery. See the device manual for complete user instructions, contraindications, warnings, precautions, and potential complications/adverse events. For further information, call Coloplast Corp at 1-855-605-7594 or consult the company website at www.coloplast.us. Caution: Federal law restricts this device to sale by or on the order of a physician.

Male External Catheters

Male External Catheters (Condom Catheters)

Coloplast offers a complete line of male external catheters. A variety of styles and sheath lengths are designed to suit end-user needs. A complete incontinence system can be achieved by combining a Coloplast male external catheter and a Coloplast leg bag.

Conveen® Optima

A self-adhering, 100% silicone clear male external catheter packaged in a discreet, recyclable smart pack.

- Easy on - the double strip grip provides an easy and accurate application
- Triple action system with anti-kink bellow, sure grip ribs and push ring provide increased security
- The PSX silicone is soft, flexible and breathable
- The GX adhesive is reliable and skin friendly
- **Not made with natural rubber latex**

Urology patients enrolled in Coloplast Care receive a welcome kit with clinician-validated education and tools to support their intermittent catheterization routine.

Kits* include:

- Male and female, and English and Spanish versions
- A cinch bag (by request for men) or purse (for women) to hold catheters
- A leg mirror (for women)

And wellness education on:

- Intermittent catheterization
- Urinary tract infections
- Hand hygiene
- Bladder diary

Pediatric kits are also available with:

- Parent's guide to intermittent catheterization
- Understanding UTIs
- Storybooks & Toobie activity book

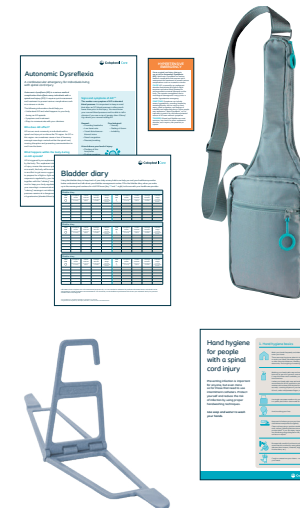

Rehab kits also include:

- Pantler (device to help keep pants pulled down during catheterization)
- Shoulder bag (male)
- Leg mirror and purse to carry catheters (female)

Wellness education on:

- Intermittent catheterization
- Urinary tract infections
- Bladder diary
- Hand washing & hygiene guide for spinal cord injury
- Autonomic Dysreflexia overview and AD laminated info card

This document represents no promise or guarantee by Coloplast Corp. regarding coverage or payment for products or procedures by CMS or other payers. Providers are responsible for reporting the codes that most accurately describe the patient's medical condition, procedures performed and products used. Providers should check Medicare bulletins, manuals, program memoranda and Medicare guidelines to ensure compliance with Medicare requirements. Inquires should be directed to the appropriate other payer for non-Medicare coverage situations.

Medicare Reimbursement - Continence Care

Usual maximum limits for some products from the Medicare Local Coverage Determinations (LCD) are shown below. Suppliers should examine their applicable Medicare contractor policies for full examination of policy requirements, including medical necessity and documentation.

HCPCS*	Long Description	Usual Maximum
A4310	Insert tray without drainage bag and without catheter (accessories only)	1 insertion tray per episode of indwelling catheter insertion
A4332	Lubricant, individual sterile packet, each	200/month

Luja™ Coudé is indicated for use by patients with urine retention and patients with post void residual volume (PVR) due to neurogenic and non-neurogenic voiding dysfunction. The catheter is inserted into the urethra to reach the bladder allowing urine to drain. The product is indicated for male patients only (adults and pediatric above the age of 1 years). Available by prescription only. Patients performing self-catheterization should follow the advice of, and direct questions about use of the product to, their medical professional. Apply with caution if the patient produces urine with many particles clearly distinguishable by the naked eye, as it may lead to transient urine retention. Before using the device, carefully read the product labels and information accompanying the device including the instructions for use which contain additional safety information. For single-use only; discard it after use. If you experience symptoms of a urinary tract infection, or are unable to pass the catheter into the bladder, contact your healthcare professional. The risk information provided here is not comprehensive. To learn more, talk to your healthcare provider. For further information, call Coloplast Corp. at 1-866-226-6362 and/or consult the company website at [HYPERLINK "http://www.coloplast.us"](http://www.coloplast.us) www.coloplast.us.

Luja™ female is indicated for use by patients with urine retention and patients with a post void residual volume (PVR) due to neurogenic and non-neurogenic voiding dysfunction. The catheter is inserted into the urethra to reach the bladder allowing urine to drain. The product is indicated for female patients only (adults and children of and above the age of 2 years). Available by prescription only. Patients performing self-catheterization should follow the advice of, and direct questions about use of the product to, their medical professional. Apply with caution if the patient produces urine with many particles clearly distinguishable by the naked eye, as it may lead to transient urine retention. Before using the device, carefully read the product labels and information accompanying the device including the instructions for use which contain additional safety information. For single-use only; discard it after use. If you experience symptoms of a urinary tract infection, or are unable to pass the catheter into the bladder, contact your healthcare professional. The risk information provided here is not comprehensive. To learn more, talk to your healthcare provider. For further information, call Coloplast Corp. at 1-866-226-6362 and/or consult the company website www.coloplast.us. Self-Cath® Catheters are prescribed for use by pediatric patients (neonates to age 21) and adults who require bladder drainage due to chronic urine retention or post void residual volume (PVR). Before use, carefully read all of the instructions. Call your doctor if you think you have a UTI or can't pass the catheter into the bladder. For more information regarding risks, potential complications and product support, call Coloplast Corp. at 1-866-226-6362 and/or consult the company website at www.coloplast.us.

Self-Cath® Closed Catheters are prescribed for use by pediatric patients (neonates to age 21) and adults who require bladder drainage due to chronic urine retention or post void residual volume (PVR). More specifically it is intended for use where drainage of the bladder into a suitable receptacle such as a commode or bedpan is not feasible or practical. Before use, carefully read all of the instructions. Call your doctor if you think you have a UTI or can't pass the catheter into the bladder. For more information regarding risks, potential complications and product support, call Coloplast Corp. at 1-866-226-6362 and/or consult the company website at www.coloplast.us.

Self-Cath® Plus Catheters are prescribed for use by pediatric patients (neonates to age 21) and adults who require bladder drainage due to chronic urine retention or post void residual volume (PVR). Before use, carefully read all of the instructions. Call your doctor if you think you have a UTI or can't pass the catheter into the bladder. For more information regarding risks, potential complications and product support, call Coloplast Corp. at 1-866-226-6362 and/or consult the company website at www.coloplast.us.

SpeediCath® catheters are prescribed for use by pediatric patients (neonates to age 21) and adults who require bladder drainage due to chronic urine retention or post void residual volume (PVR). Before use, carefully read all of the instructions. Call your doctor if you think you have a UTI or can't pass the catheter into the bladder. For more information regarding risks, potential complications and product support, call Coloplast Corp. at 1-866-226-6362 and/or consult the company website at www.coloplast.us.

SureCath® Set Catheters are prescribed for men and women with chronic urine retention or post void residual volume. Before use, carefully read all of the instructions. Call your doctor if you think you have a UTI or can't pass the catheter into the bladder. For more information regarding risks, potential complications and product support, call Coloplast Corp. at 1-866-226-6362 and/or consult the company website at www.coloplast.us.
